

Common Sense and Language

Benjamin Van Durme

Credit: Benjamin Van Durme

Hobbs (1987)

*We use words to talk about the world.
Therefore, to understand what words mean,
we must have a prior explication of how we
view the world.*

Common Sense and Language

Definitions

Shared Knowledge

If ...

Shared Knowledge

If ...

I know **p**

Shared Knowledge

If ...

I know **p**

You know **p**

Shared Knowledge

If ...

I know **p**

You know **p**

I know that you know **p**

Shared Knowledge

If ...

I know **p**

You know **p**

I know that you know **p**

You know that I know **p**

Shared Knowledge

If ...

I know **p**

You know **p**

I know that you know **p**

You know that I know **p**

Then **p** is *shared knowledge*

Background Knowledge

If **p** is **shared** across some group,

then we say that **p** is *background knowledge*

Common Sense

When that group is really big then p is called:
commonly known background knowledge

or just simply: *common sense*

Nunberg (1987)

*... this extensive body of knowledge ...
underlies the use of natural-language ... when
they interpret utterances – **this is what
constitutes their “common-sense beliefs” ...***

Inference

Clark (1975)

[*bridging inferences*] conveyed by language
... draw on one's knowledge of natural
objects and events that goes beyond one's
knowledge of language itself.

McCarthy (1959)

*a program has **common sense** if it automatically deduces for itself a sufficiently wide class of immediate consequences of **anything it is told** and what it already knows*

Stanford Report. June 18, 2003.

Hobbs *et al.* (1993)

Interpretation as Abduction:

The interpretation of a text is the minimal explanation of why the text would be true

Schank (1975)

*It has been apparent ... within the domain of **natural language understanding** ... that the eventual limit to our solution ... would be our ability to characterize world knowledge.*

Schank (1975)

*In order **to build a real understanding system** it will be necessary to organize the knowledge that facilitates understanding.*

[fast forward forty years]

Bos (2013)

The bottleneck in achieving high recall is the lack of a systematic way to produce relevant background knowledge ...

the knowledge acquisition problem.
